

LUTOR YIYE

Front-End Web Developer · IT Support

Abuja, Nigeria | +234 814 424 6731 | lutoryiye@gmail.com

SUMMARY

Front-end developer with 4+ years building responsive, accessible interfaces in HTML, CSS, JavaScript and React from consumer payment platforms to a book club management app and a non-profit website. Experience in owning a build end to end, translating designs into production code, optimising performance, and handling the operational and IT support work that keeps small teams shipping. Reliable in fully remote environments and trusted with confidential information.

TECHNICAL SKILLS

Front-end: HTML5, CSS3 (Flexbox, Grid), JavaScript (ES6+), React, responsive design, UI/UX implementation

Quality: Cross-browser compatibility, web performance optimisation, testing and debugging, accessibility basics

Tools: Git, Google Workspace, Microsoft Office (Word, Excel, PowerPoint), graphic design tools

Operations: Technical documentation, data entry, research, task coordination, confidential data handling

EXPERIENCE

Freelance Front-End Developer *Jan 2024 – Present · Remote*

Clients include Pages & People and Elela Attah Foundation

- Built the front end of Pages & People, a book club management app — member and club dashboards, reading schedules, discussion views and meeting pages — in React with a reusable component library and mobile-first layouts.
- Designed and developed the website for the Elela Foundation, a non-profit organisation, covering programme and donation pages, a content structure the team can maintain without a developer, and load times fast enough for low-bandwidth connections.
- Translated designs into production code across both projects, testing on real devices to keep interfaces consistent from small phones to desktop.
- Handled deployment, ongoing fixes and stakeholder updates directly with founders and non-technical clients.
- Provided remote operations and IT support alongside development work: managing calendars and time-sensitive scheduling, research and reporting, organised digital file systems and shared workspaces, and deadline tracking — all with consistent discretion around confidential information.

Game Systems Developer — Playzone Technologies Limited *Aug 2022 – Feb 2024 · Abuja*

- Built automated moderation tools that enforced community guidelines and cut the volume of manual intervention needed during live sessions.
- Maintained back-end systems handling real-time game events, player data and in-game economies at scale.
- Worked with the development team on new game scenarios and mechanics, scripting gameplay features end to end.
- Ran code reviews and live debugging sessions, improving stability and performance during active sessions.

Front-End Web Developer — Buypower *Mar 2021 – Aug 2022 · Abuja*

- Developed and maintained responsive interfaces in React and CSS for a consumer payments platform used across a wide range of devices and screen sizes.
- Implemented interactive JavaScript features that improved usability and customer engagement through the purchase flow.
- Partnered with UX/UI designers to turn wireframes and prototypes into high-quality code aligned to brand guidelines.

- Reduced load times and improved rendering through code refactoring and asset optimisation.
- Tested and debugged front-end code, resolving issues quickly to keep user journeys error-free.

Web Developer Intern — Akem Travels and Tours Aug 2019 – Feb 2020 · Abuja

- Built and maintained the company website and in-house travel booking management system.
- Created landing pages for travel packages with the marketing team, plus the organisation's first colour palette and style guide.
- Acted as first point of contact for website and system issues, and documented software specifications and processes.

SELECTED PROJECTS

- **Pages & People** — front end of a book club management application: club creation, member management, reading progress and discussion screens, built as reusable React components with a mobile-first layout.
- **Elela Foundation website** — non-profit site covering programmes, impact and donations, built for clarity, fast loading and easy maintenance by a team.
- **Customer management web application** — customer records, registration, and payment and billing history, with secure authentication, account self-service and password reset.
- **Responsive booking form** — multi-step travel booking form built with HTML and CSS Grid/Flexbox, accessible and consistent from mobile to desktop.

EDUCATION

BSc (Hons) Computer Science — Federal University of Agriculture, Makurdi, Nigeria
